Fit for the role

93%

Excellent match

Alessandro ARENSBERG

Years of experience

2

Education

MSc in Data & AI for Finance

Relevant experience

Alessandro has practical experience in developing and implementing machine learning models and data pipelines, including building scraping applications and automated ETL processes. His experience includes engineering advanced backtesting systems in Python for investment strategies and modeling credit fund behavior, directly aligning with the role's focus on AI for portfolio optimization in finance. He also has direct project experience with Edmond de Rothschild, designing an end-to-end data pipeline.

Key skills

Python SQL Machine Learning ETL
Financial Modelling Data Science
Statistical Modeling

Assessment

Strengths

Strong academic background in Data & AI for Finance, directly aligning with the role's specialization.

Proven practical experience in developing and implementing machine learning models and data pipelines using Python and SQL.

Demonstrated interest and foundational knowledge in financial markets and instruments, including algorithmic trading and investment strategy development.

Areas for improvement

Gain direct hands-on experience with Databricks, as it is mentioned as an appreciated skill in the job description.

Further develop experience in integrating AI solutions with web interfaces, as mentioned in the job description's themes.

While strong in technical skills, continued development in translating complex technical solutions into clear business value for portfolio managers would be beneficial.

Experience with end-to-end data solutions, from data acquisition and ETL to model deployment and business integration.

Direct project experience with Edmond de Rothschild, showing familiarity with the institution and relevant problem-solving skills.

Recommendation

☒ Strong hire — move the candidate to interview.
