54%

Average match

Alessandro ARENSBERG

Years of experience

0

Education

Bachelor Business & Data from Albert School

Relevant experience

The candidate has academic project experience in data analytics and AI, including developing an automatic response algorithm using NLP and clustering for Apiday, and optimizing maritime routes using network analysis and geographical data scraping for CMA CGM. Their only listed professional experience is a non-technical observation internship.

Key skills

- Python
- Data Analytics
- Web Scraping
- Natural Language Processing (NLP)
- Clustering
- Network Analysis
- Data Visualization

Assessment

Strengths

Strong foundational skills in Python for data analysis and AI, demonstrated through academic projects.

Proven ability to apply data science techniques like NLP, clustering, and network analysis to business problems.

Explicit and strong interest in financial markets and instruments, which is highly relevant to the role.

Proficiency in data acquisition (web scraping) and various data visualization tools.

Areas for improvement

Develop proficiency in SQL, which is a core requirement for data flow structuring in the role.

Gain exposure to Databricks or similar cloud-based data platforms for model development and integration.

Acquire more direct professional experience in data science or AI roles within a business context.

Further deepen knowledge in financial instruments and portfolio optimization specific to asset management.

Recommendation

Borderline — consider only if the pipeline is thin.
