Analysis

Fit for the role

30%

Low match

Alessandro ARENSBERG

Years of experience

0

Education

Bachelor in Business
& Data from Albert
School

Relevant experience

The candidate's most relevant experience comes from academic projects, including developing an automatic response algorithm for ESG questionnaires using clustering and NLP, and optimizing maritime routes with NetworkX and geographic data scraping. They also completed a brief observation internship in HR within the agri-food sector.

Key skills

Python Pandas Matplotlib

Web scraping (Requests, BeautifulSoup, Selenium)

Clustering NLP (semantic similarity) NetworkX

Assessment

Strengths

Possesses solid foundational data analysis and programming skills in Python, Pandas, and visualization libraries.

Has practical experience with data acquisition techniques like web scraping.

Demonstrates exposure to advanced data science concepts such as clustering and NLP through academic hackathons.

Shows an expressed interest in financial markets (Forex, Cryptocurrencies, Metals), which is relevant to a CIB environment.

Areas for improvement

The candidate lacks significant professional work experience in a data science or financial audit context.

Currently pursuing a Bachelor's degree, while the ideal profile for this alternance specifies an MSc in Data for Finance and a prior IT background.

There is a significant mismatch in the desired contract type and timing; the candidate is seeking an internship starting May 2024, whereas the role is a 2-year alternance starting October 2026.

Is currently enrolled in Albert School, which is mentioned in the job description's ideal educational path.

Needs to develop deeper expertise and practical application of data science specifically within financial audit and market activities.

Recommendation

 Not recommended for this role.
